

PROJECT GUIDE

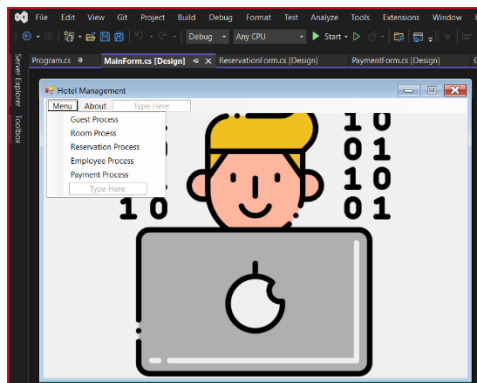

We have used C# FORM APPLICATION on VISUAL STUDIO. We will explain our visual studio, then we will show how can you start project. First of all, we have created forms for our database tables. Then we connected our database with visual studio as you can see in the photo. After that we have started

to create forms. Our first form is LoginForm.

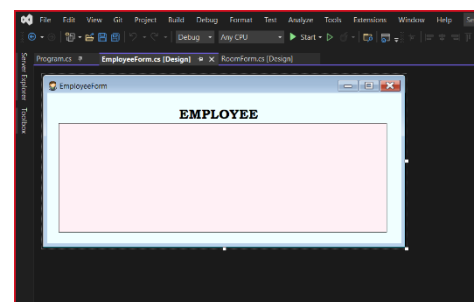

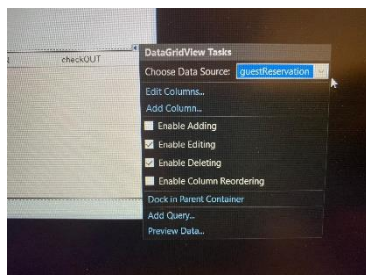

As you can see, there are username and password part. These are connected with our database which is in employee table. If you write wrong username or password, there is a message box that shows "wrong username or password.". If you entered right datas that is created in employee table- emp_pass and emp_username columns.

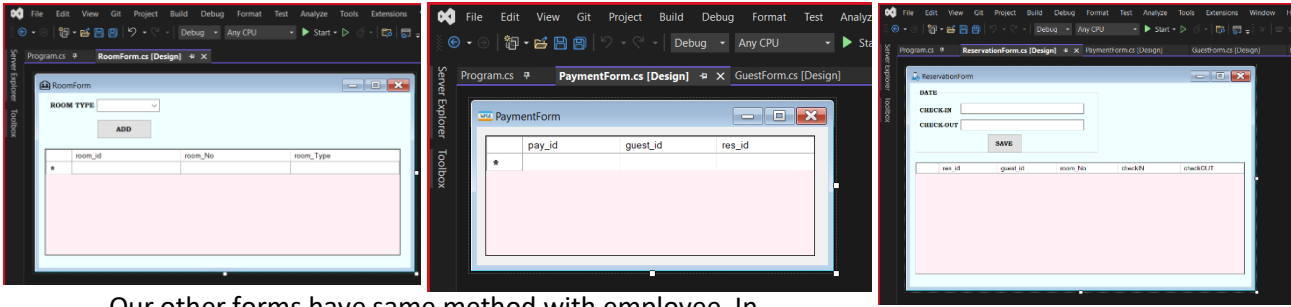

After login part, you will see main menu which includes our table forms.

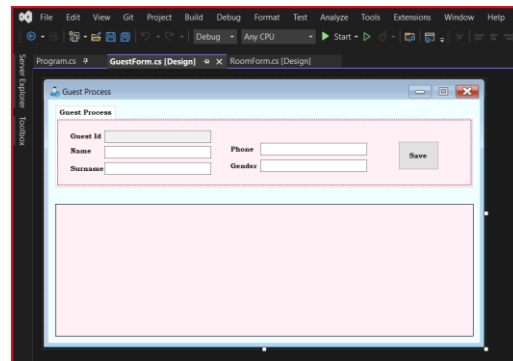

When you double click to any process, you will go to form's codes. We will not add code part to here because we will send all project files.

In employee part, we have used label and datagrid. Datagrid provides to see our database columns and their datas.

Our other forms have same method with employee. In reservation form, room form and guest form, you can add any data which includes their columns

In this part you will see how our project is start.

The login form has a Username field with the text 'aya' entered, a Password field with masked characters '***', and two buttons labeled 'Exit' and 'Login'.

You have to enter username "aya" or "180444061" or "180444030" and password "123".

On main menu, we choose guest process. As you can see you can add any data that includes columns. After that with "add" button, you can add data to our database.

The Guest Process form shows input fields for Guest Id, Name, and Surname. Below the form is a table with columns: guest_id, guest_name. The first row of the table contains the values 10 and Mehmet.

room_id	room_No	room_Type
102	102	Sut
103	103	Deluxe
104	104	Sut
105	105	Sut
106	106	Sut
107	107	Sut

Room form and guest reservation form have same function.

The ReservationForm shows two input fields labeled CHECK-IN and CHECK-OUT.
